

The Dynamiclear Story

Dynamiclear was developed in a small but passionate health clinic located in the tropical Cairns Highlands of Australia.

This health center is the longest running naturopathic practice in Far North Queensland. In the last decade a company called Dynamiclear Pty Ltd emerged from this team, specializing in developing effective natural remedies to help with the symptoms of HSV conditions, including genital herpes and cold sores.

The dedication to find an effective answer to combat HSV symptoms lead to the evolution of Dynamiclear.

Relief from the symptoms of HSV in ONE APPLICATION

Dynamiclear's clinically tested formula only requires one application to help reduce the healing time of genital herpes and cold sore symptoms.

- ✓ Only One Application is Required
- ✓ Reduces Healing Time
- ✓ No Messy Repeat Applications
- ✓ Fast Acting and Effective Relief
- ✓ It is Odorless and Convenient
- ✓ Built in moisturizer soothes skin

Dynamiclear offers you and your loved ones relief from the symptoms of HSV-1 and HSV-2 in one application.

Simple, Easy, Convenient.

Dynamiclear™

ADVANTAGE

CLINICALLY TESTED ANTIVIRAL FORMULA
Symptomatic relief of HSV-1 and HSV-2 conditions

UP TO
100 SINGLE APPLICATIONS

- ◆ Requires just one application
- ◆ Reduces healing time
- ◆ Extra size value pack
- ◆ Built-in natural moisturizer

POWERFUL ANTIVIRAL FORMULA

1. PREPARE

2. APPLY

3. HEAL

SKIN SENSITIVITY TEST: Prior to first use apply a small amount of the solution onto the skin inside the elbow and wait a reasonable period of time. If inflammation occurs wash the area and discontinue use.

1. PREPARE

Apply the Dynamiclear solution onto a cotton swab.

2. APPLY

Apply one thorough application to the affected area. An antiseptic stinging or tingling sensation can be expected. Only one correct application is required.

3. HEAL

Keep the area of application dry until healed and take care when showering.

Dispose of cotton swab hygienically.

Dynamiclear™

ADVANTAGE

Helpful Hints:

- ✓ **For most impressive results apply to an active blister or sore.**
- ✓ **Apply to clean skin that is free from make-up and other products.**
- ✓ **Preferably apply before going to bed. Dynamiclear may cause the scab to form a blue or greenish tinge, this is a normal part of the healing process which fades naturally.**
- ✓ **Excess colouring or stinging may occur if the solution is over applied. Apply only as directed.**
- ✓ **Wait until the surface has dried out and is healing before applying make-up.**
- ✓ **Avoid removing or wetting any scab if one forms and allow to heal naturally.**
- ✓ **In rare cases, if crusting or healing has not begun after 72 hours a second application may be required.**

So... What is HSV?

HSV stands for Herpes simplex virus. This is a microscopic virus which most people are exposed to at some point in their life. It is the cause of common skin ailments such as cold sores, genital herpes and whitlow.

Why Do These Conditions Occur?

HSV infections tend to surface when the body's immune system is run down or when there is some sort of injury to that skin area. For example being sick, under stress, not getting enough sleep, hormonal changes, sunburn, other health conditions or eating certain foods can aggravate or bring on a HSV breakout for some people. For a free diet information guide email diet@dynamicclear.com

If the symptoms come back again and again...

Please consider taking Dynamiclear's recommended supplements to target the HSV internally and help stop recurring symptoms. These are two specific formulas which optimize the body's immunity and have been demonstrated in Clinical Trials to reduce HSV replication and shedding.

Visit Dynamicclear.com for more information.

Being Safe with HSV conditions

Herpes simplex is an infection that can be contagious so it is important to take extra care not to spread the virus whenever you see or feel any symptoms.

- ✗ Do not touch the infection. If you do, wash your hands as soon as possible.
- ✗ Be mindful of touching the eyes. Do not share objects that may have come into direct contact with the infected area.
- ✗ Do not pick the scab if one forms. This could cause a scar or prolong healing.
